

# HAZELNUT COLOMBA

## LARGE LEAVENED PRODUCTS

DIFFICULTY LEVEL

## **FIRST DOUGH**

INGREDIENTS		PREPARATION
DOLCE FORNO MAESTRO	g 6500	-Knead DOLCE FORNO MAESTRO with the yeast and all the water indicated in the recipe for 5-
WATER	g 2400	10 minutes.
EGG YOLK	g 1600	-When the dough begins to take shape, add the sugar and the egg yolk little by little until you
CASTER SUGAR	g 500	obtain a smooth consistency, then, add the softened butter in 3-4 times.
UNSALTED BUTTER 82% FAT	g 2000	-Check that the temperature of the dough is at about 26-28°C.
YEAST - BREWER'S	g 30	-Place in the proofer for 12-14 hours at 22-24°C with relative humidity of about 70/80%. If the
		proofer is unprovided of the humidifier, cover the dough with a plastic cloth. During this first
		process, the dough should have quadrupled its initial volume.
		ADVICES:
		-We suggest cutting out a 250g piece of the dough and to put it into a 1L jug to check the pace of
		the leavening and verify the quadruplication of its volume.

-Start kneading on second speed and when around the end of the kneading finish on first speed.

-If the temperature of the first dough is higher than 28°C, you should shorten the first rising time. -If using a spiral or a hook planetary mixer it is important to reduce the amount of water for the first dough from 2400 to 2300gr.

## HAZELNUT GANACHE

INGREDIENTS		PREPARATION
JOYPASTE NOCCIOLA PREMIUM	g 1200	-Mix, with the help of a whisk, JOYPASTE NOCCIOLAPREMIUM with the boiling water.
WATER - BOILING	g 900	-Cover the dough with a film and let it rest at room temperature all night long.

## SECOND DOUGH

INGREDIENTS		PREPARATION
DOLCE FORNO MAESTRO	g 3500	-The next morning, the dough shall be slightly curved.
WATER - ROOM TEMPERATURE	g 400	-Add to the evening dough the DOLCE FORNO MAESTRO and then knead for about 5-10
EGG YOLK - ROOM TEMPERATURE	g 1500	minutes.
UNSALTED BUTTER 82% FAT - CREAMY	g 1400	-Once all the ingredients are absorbed in the mixture, add sugar, salt, and a part of the yolk. Add
CASTER SUGAR	g 800	the remaining yolk in two times and keep kneading.
SALT	g 110	-Mix the honey and the softened butter and add the mixture to the dough in two or three times.
HONEY	g 500	-Add the hazelnut ganache to the dough in four times.
NOCCIOLE INTERE TOSTATE - TOASTED AND CHOPPED	g 1500	-Add the toasted hazelnuts and the candy orange.
CANDIED ORANGE PEEL CUBES	g 1500	-Place in the proofer for 1 hour at 28-30°C.
		-Divide the dough into the desired size, roll them up, place on trays and let it rest for 10-15
		minutes at 28-30°C.
		-Roll them up again and transfer into the specific paper moulds.

-Place into the proofer at 28-30°C with relative humidity of 70-80%, until the top of the dough is 1 cm lower from the mould. If the proofer is unprovided of the humidifier, cover the pastry with a plastic cloth.

INGREDIENTS		PREPARATION
DELINOISETTE	g 1400	-Mix DELINOISETTE, sugar, and the rice starch.
CASTER SUGAR	g 700	-Add the egg white and mix in the planetary mixer with the paddle attachment for 5 minutes.
EGG WHITES	g 560	-Add the melted butter and mix.
RICE STARCH	g 420	-With the help of a flexible spatula or a pastry bag with the flat nozzle, brush evenly the glaze on
UNSALTED BUTTER 82% FAT	g 280	the surface of the leavened product.
CACAO IN POLVERE	g 210	ADVICES:
		-Prepare the glaze at the time of use.
		-Do not change the type of starch used.

#### **PISTACHIO FILLING**

#### FINAL COMPOSITION

Once the proofing process is complete, let the colomba rest at room temperature for 20-25 minutes until a light film is formed on the surface.

-Cover the surface of the products with the glaze and decorate it with hazelnuts and then sprinkle with granulated and icing sugar.

-Bake at 160-170°C. The baking time depends on the weight of the colomba (about 50 minutes for the 1kg pieces) but bake until the core temperature reaches a core temperature of 93-95°C. -Once churned out from the oven turn the colombe upside down with the help of the toothed racks.

-Let the fresh baked colombe cool upside down for 8-10 hours before packing them into moplefan bags.

### ADVICES:

### How to calculate the temperature of the water for the first dough:

If you are using a double arm mixer this is the right procedure. If you are using a spiral mixer, considering that it warms up the dough, lower the temperature at least of 5°C.

To obtain the right temperature, for example 26°C, follow this scheme:

It is mandatory to know and use 3 values:

1)The value of the room temperature

2) The value of the DOLCEFORNO temperature

3)The value of the used mixer (double arm 15, spiral or planetary 20)

**CALCULATION**: final temperature  $26^{\circ}C \times 3$  (fixed number) = 78 - Value 1 (e.g.  $20^{\circ}C$ ) - VALUE 2 (e.g.  $20^{\circ}C$ ) - value 3 (e.g. 15) = 78-20-18-15 = 25. 25 should be the temperature of the first dough if using a double arm mixer.
