- Separately create the mixture of soft butter, honey, orange paste and vanilla and incorporate it into the paste 4 times.
- Check that the temperature of the dough is 26-28°C. If the temperature is lower, it is advisable to slightly heat the candied fruit and sultanas on a baking tray by placing them in the oven for 1-2 minutes.
- Gently incorporate the sultanas and candied fruit.
- Place the dough to proof in the leavening cell at 28-30°C for 60-70 minutes.
- Divide the dough into the desired sizes, then roll up and place on baking trays or boards and leave to rest for another 20 minutes at 28-30°C.
- Roll up again and place in the appropriate paper moulds.
- Place in a leavening cell at 28-30°C with relative humidity of approximately 60-70% for 4-5 hours, until the top of the dough reaches approximately 1 cm from the mould; if the cell does not have a humidifier, keep the panettone covered with plastic sheets.

FINAL COMPOSITION

- After leavening, leave the panettone exposed to the ambient air for 20-25 minutes so that a skin forms on the surface.
- With a sharp knife, make two superficial incisions forming a cross (the cuts to be made on the surface of the panettone must not be too deep and are necessary to give the finished product its characteristic and traditional shape).
- Cut the four edges under the skin and insert a small knob of cold butter in the center of the panettone.
- Cook at 165-185°C for variable times depending on the weight (about 35-40 minutes for 500 gram panettone, 50-60 minutes for 1000 gram panettone), until reaching 92-94°C at the core.
- Upon exiting the oven, turn the panettone upside down, using the appropriate panettone turners.
- Freshly baked panettone must be left to cool upside down for 8-10 hours before packaging in moplefan bags.
