ADVICES:

How to calculate the temperature of the water for the first dough:

If you are using a double arm mixer this is the right procedure. If you are using a spiral mixer, considering that it warms up the dough, lower the temperature at least of 5°C.

To obtain the right temperature, for example 26°C, follow this scheme:

It is mandatory to know and use 3 values:

- 1)The value of the room temperature
- 2) The value of the DOLCEFORNO temperature
- 3) he value of the used mixer (double arm 15, spiral or planetary 20)

CALCULATION: final temperature 26°C x 3 (fixed number) = 78 – Value 1 (e.g. 20°C) – VALUE 2 (e.g. 20°C) – value 3 (e.g. 15) = 78-20-18-15 = 25. 25 should be the temperature of the first dough if using a double arm mixer.
